CURRICULUM STRUCTURE

01 Foundations → 13 LESSONS

02 APIs, services and protocols → 13 LESSONS

03 Data modeling and SQL → 13 LESSONS

04 NoSQL, partitioning and IDs → 14 LESSONS

05 Caching and fast reads → 6 LESSONS

06 Distributed coordination → 13 LESSONS

07 Storage engines → 20 LESSONS

08 Async work and streams → 10 LESSONS

09 Search and retrieval → 17 LESSONS

10 Analytics and sketches → 13 LESSONS

11 Realtime, social and feeds → 10 LESSONS

12 Geo, matching and recs → 8 LESSONS

13 Media, files and CDN → 11 LESSONS

14 Reliability and operations → 13 LESSONS

BEST EXPERIENCED ON DESKTOP ×

15 Service and data designs → 7 LESSONS

16 Product designs → 8 LESSONS

17 Media and operations designs → 6 LESSONS

18 Engineering case studies → 5 LESSONS

FULL CURRICULUM

All 200 Real-world systems 35 Case studies 5 List Grid

MODULE 01 13

Foundations

01.01 Requirements clarification →

01.02 Logical system design →

01.03 Non-functional requirements →

01.04 System design tradeoffs →

01.05 Availability, durability, consistency, cost →

01.06 Back-of-the-envelope capacity planning →

01.07 How a server handles many requests →

01.09 Monolith vs microservices →

BEST EXPERIENCED ON DESKTOP

01.10 Repository pattern

01.11 Extensible data modeling

01.12 Cost-aware architecture

01.13 When not to add infrastructure

MODULE 02 13

APIs, services and protocols

02.01 API design contracts

02.02 Service-to-service communication

02.03 HTTP, REST, and gRPC

gRPC

02.04 TCP vs UDP

02.05 API gateway vs load balancer

02.06 Load balancers

nginx

WITH CODE

BEST EXPERIENCED ON DESKTOP

02.08 Event contracts

02.09 **Retries, timeouts, and idempotency**

02.10 **Batching**

02.11 **Backpressure**

02.12 **Tail latency**

02.13 **Load shedding**

MODULE 03 13

Data modeling and SQL

03.01 **Relational database design**

PostgreSQL

03.02 **a key-value store on SQL**

A design walkthrough you can build from.

PostgreSQL

03.03 **Database indexing**

PostgreSQL

03.04 **B-tree**

PostgreSQL

BEST EXPERIENCED ON DESKTOP

03.05 **Query planning**

PostgreSQL

03.06 **Database locking and isolation**
PostgreSQL

03.07 **MVCC**
PostgreSQL

03.08 **Database WAL and recovery**
PostgreSQL
WITH CODE

03.09 **Database ticket servers**

03.10 **Relational database scaling**

03.11 **Online indexing**
PostgreSQL

03.12 **Schema evolution**

03.13 **Soft delete**

MODULE 04 14

NoSQL, partitioning and IDs

04.01 **NoSQL decision boundaries**

04.02 **Document vs key-value stores**

BEST EXPERIENCED ON DESKTOP

04.03 **Columnar vs wide-column stores**

04.04 **Graph database decision boundary**

04.05 **Sharding and partitioning**

04.06 **Hot partitions**

04.07 **Consistent hashing** WITH CODE

04.08 **Distributed ID generation**

04.09 **UUID, ObjectId, and Snowflake**
MongoDB

04.10 **Snowflake ID design** WITH CODE

04.11 **Clock skew and ID ordering**

04.12 **Keyset pagination** WITH CODE
PostgreSQL

04.13 **Bloom filters** WITH CODE

BEST EXPERIENCED ON DESKTOP

MODULE 05 6

Caching and fast reads

05.01 **Caching layers**
MySQL

05.02 **Distributed cache design**
Redis

05.03 **Cache eviction policies** WITH CODE

05.04 **TTL expiration and cache reapers** WITH CODE

05.05 **Cache concurrency control**
Redis

05.06 **Cache availability and database fallback**

MODULE 06 13

Distributed coordination

06.01 **Distributed systems foundations**

06.02 **Consistency models**

06.03 **Replication**

06.04 **CAP and PACELC**

BEST EXPERIENCED ON DESKTOP

06.05 Clocks and ordering

06.06 Consensus

06.07 Leader election WITH CODE

06.08 Distributed locks and leases

06.09 Redis Redlock and fencing tokens
Redis

06.10 Circuit breakers and timeouts

06.11 Gossip protocol WITH CODE

06.12 Metadata service and node discovery

06.13 Distributed hash tables

MODULE 07 20

Storage engines

07.01 Storage engine design constraints

07.02 Storage engine tradeoffs

BEST EXPERIENCED ON DESKTOP

07.03 A file-backed dictionary →

07.04 Custom binary file format ★ →

07.05 Byte-range indexed object storage →

07.06 Immutable versioned data files ★ →

07.07 Log-structured storage ★ →

07.08 Bitcask storage engine ★ →

07.09 LSM-tree storage engine
RocksDB ★ →

07.10 Memtable, WAL, and SSTable ★ →

07.11 LSM read path: Bloom filters and sparse index
RocksDB ★ →

07.12 Compaction and amplification ★ →

07.13 Object storage vs database ★ →

BEST EXPERIENCED ON DESKTOP

07.15 Range partitioning vs consistent hashing for storage

07.16 Partition manager and map table

07.17 Metadata database for object storage

07.18 Append-only stream layer

07.19 Durability and replication

07.20 End-to-end checksums

MODULE 08 10

Async work and streams

08.01 Delegation and async work

08.02 Task queue vs event stream

08.03 Event bus for product events

08.04 Queue lag

08.05 Distributed task scheduler

BEST EXPERIENCED ON DESKTOP

PostgreSQL

08.07 DAG workflow orchestration ★ →

08.08 Rule engine and trigger framework →

08.09 Fanout patterns ★ →

08.10 Flash sale inventory locking ★ →

MODULE 09 17

Search and retrieval

09.01 Information retrieval system design ★ →

09.02 Inverted index and posting lists WITH CODE ★ →

09.03 Boolean and tiered search →

09.04 TF-IDF relevance scoring ★ →

09.05 BM25 production ranking
Lucene ★ →

09.06 Stop words and champion lists →

09.07 Query understanding pipeline ★ →

BEST EXPERIENCED ON DESKTOP

09.08 **Search feedback and relevance signals**

09.09 **Search evaluation metrics**

09.10 **Search index synchronization**

09.11 **Search index sharding**

09.12 **Crawler and indexing pipeline**

09.13 **Vector search and hybrid retrieval**

09.14 **autocomplete**

A design walkthrough you can build from.

ASKED IN Google Amazon LinkedIn

09.15 **did-you-mean and spell correction**

A design walkthrough you can build from.

ASKED IN Google Microsoft

09.16 **related searches**

A design walkthrough you can build from.

09.17 **recent searches**

A design walkthrough you can build from.

BEST EXPERIENCED ON DESKTOP

Analytics and sketches

10.01

Counting at scale

10.02 View counting at scale ★ →

10.03 Impression counting ★ →

10.04 HyperLogLog cardinality estimation ★ →

10.05 Mergeable sketches for analytics →

10.06 Bucketed time-window aggregation ★ →

10.07 Raw events vs derived analytics ★ →

10.08 Count-min sketch ★ →

10.09 Top-k heavy hitters ★ →

10.10 Reservoir sampling ★ →

10.11 t-digest quantile sketch →

10.12 Streaming percentile analytics ★ →

BEST EXPERIENCED ON DESKTOP

ASKED IN Meta Twitch

MODULE 11 10

Realtime, social and feeds

11.01 **Realtime database and WebSocket scaling**

11.02 **WebSockets vs SSE vs long polling**

11.03 **Social network database modeling**

11.04 **Social graph: follows and FlockDB**

11.05 **Feed generation: push, pull, hybrid**

11.06 **a newly-unread indicator**

A design walkthrough you can build from.

Redis

ASKED IN Slack Meta

11.07 **Hashtag extraction and tag store**

11.08 **Reaction modeling**

11.09 **photo tagging coordinates**

A design walkthrough you can build from.

live commentary

BEST EXPERIENCED ON DESKTOP

ASKED IN ESPN Meta

MODULE 12 8

Geo, matching and recs

12.01 Nearby geospatial search

12.02 Geohash prefix spatial index

12.03 Grid systems: H3, S2, geohash

12.04 Redis GEO hot path

Redis

12.05 Geofencing: point in polygon

12.06 Ray casting point in polygon

12.07 Seen filtering: Bloom vs exact sets

12.08 Matching and recommendation algorithms

MODULE 13 11

Media, files and CDN

13.01 Direct-to-object-storage upload

S3

BEST EXPERIENCED ON DESKTOP

13.03 An avatar service

13.04 Video upload: signed URLs and multipart

S3

13.05 Video transcoding pipeline

13.06 Adaptive bitrate and the CDN decider

13.07 Signed URLs, DRM, and video security

13.08 Live streaming, WebRTC, and latency

13.09 Remote file sync design

13.10 Fixed-block chunking and content addressing

13.11 Blocklist versioned file metadata

MODULE 14 13

Reliability and operations

14.01 Observability for distributed systems

14.02 SLOs and error budgets

BEST EXPERIENCED ON DESKTOP

14.04 Deployment and migration safety

14.05 Database migration safety

14.06 Parallel monolith read drain

14.07 Backups and restore

14.08 Disaster recovery

14.09 Data retention, deletion, and privacy

14.10 Security and abuse prevention

14.11 Rate limiter placement and keys

14.12 Sliding window rate limiter WITH CODE

14.13 Multi-tenant design

MODULE 15 7

Service and data designs

a URL shortener, one machine

A design walkthrough you can build from.

15.01

BEST EXPERIENCED ON DESKTOP

ASKED IN Amazon Google Microsoft

rate limiting and abuse prevention

15.02

A design walkthrough you can build from.

PostgreSQL

ASKED IN Stripe Cloudflare Amazon

a URL shortener at scale

15.03

A design walkthrough you can build from.

PostgreSQL Redis

ASKED IN Amazon Google Bloomberg

a product listing

15.04

A design walkthrough you can build from.

PostgreSQL

ASKED IN Amazon Flipkart Shopify

a collaborative editor

15.05

A design walkthrough you can build from.

ASKED IN Google Figma Notion

an object store (S3)

15.06

A design walkthrough you can build from.

S3

ASKED IN Amazon Dropbox Microsoft

a Kafka-style log

15.07

A design walkthrough you can build from.

Kafka

ASKED IN LinkedIn Confluent Uber

MODULE 16 8

BEST EXPERIENCED ON DESKTOP

a notification system

16.01 A design walkthrough you can build from. →

a ticket booking system

16.02 A design walkthrough you can build from. ★ →

ASKED IN Amazon BookMyShow Uber

a payment system

16.03 A design walkthrough you can build from. ★ →

Stripe

ASKED IN Stripe PayPal Amazon

a search service

16.04 A design walkthrough you can build from. ★ →

ASKED IN Google Elastic Amazon

a recommendation system

16.05 A design walkthrough you can build from. ★ →

ASKED IN Netflix Spotify Meta

chat and messaging

16.06 A design walkthrough you can build from. ★ →

ASKED IN Meta Slack Discord

a social feed

16.07 A design walkthrough you can build from. ★ →

ASKED IN Meta Twitter LinkedIn

nearby search

16.08 A design walkthrough you can build from. ★ →

ASKED IN Uber DoorDash Yelp

BEST EXPERIENCED ON DESKTOP

MODULE 17 6

Media and operations designs

ride matching

17.01 A design walkthrough you can build from.

ASKED IN Uber Lyft DoorDash

a video platform

17.02 A design walkthrough you can build from.

ASKED IN YouTube Netflix Meta

a file sync service

17.03 A design walkthrough you can build from.

ASKED IN Dropbox Google Microsoft

observability and SLOs

17.04 A design walkthrough you can build from.

ASKED IN Datadog Google Netflix

a database migration

17.05 A design walkthrough you can build from.

ASKED IN Stripe GitLab Shopify

a photo-sharing interview

17.06 A design walkthrough you can build from.

ASKED IN Meta Pinterest Snap

MODULE 18 5

Engineering case studies

Instagram's first architecture

18.01 A company case: what they built, and what it cost them.

BEST EXPERIENCED ON DESKTOP

Stripe's idempotency keys

18.02

A company case: what they built, and what it cost them.

Stripe

how Discord stores trillions of messages

18.03

A company case: what they built, and what it cost them.

Discord Cassandra

Amazon Dynamo, the paper

18.04

A company case: what they built, and what it cost them.

Amazon

GitLab's database incident

18.05

A company case: what they built, and what it cost them.

GitLab PostgreSQL

Curated lessons show the depth of the course. Pro unlocks the protected notes, designs, and runnable builds.
